

trueChart Core

trueChart Core is the main engine of trueChart. All our other trueChart products are based on this set of high-level functions, that are detached from any other BI system.

trueChart Core enables you to integrate trueChart into your own website without needing a full featured BI system environment. Add your data from the source of your choice, define the features you want to have and go.

The *trueChart Core Guide* has more information on:

- [Build an app with trueChart Core](#)
- [trueChart Core API Reference](#)
