## TRUECHART4QLIKVIEW

TRUECHART is an enterprise solution for IBCS charts and data-driven communication. It extends the functionality of QlikView by charts with uncompromising clarity, interactive selections and real-time communication.

[Please look for general information to the TRUECHART Platform introduction.](#)

## Communicate on data points

Common chart solutions only shows the 'what' by only displaying the data points. TRUECHART extends the insights that you get from your data by giving you the possibility connect the 'what' information with the 'why'. You will have the possibility to add comments and connect them with all data points. This functionality can also be extended. By adding KPICHAT to your already existing installation of TRUECHART you will gain the possibility to chat in real-time. You have the possibility to link you chat with the data, so you only will see the information that are linked with your data.
